

# Discover “First” Wonders

## Special 6 Class Series

Enjoy “6 weeks of wonder” and discover our world, light, sound and sensory explorations, movement and more! This tailor made series is designed to provide infants with important “firsts”; first discoveries of what they can do, how things look and feel and the first opportunity to begin to connect and wonder about the world around them...

### Week 1: We're going on a bear hunt!

In our first week, children will go on a Bear Hunt that evokes all their senses. Sensory experiences from the sounds of the jungle to all the different textured and natural elements we would find during the hunt! Beautiful sights of the dark forest will be projected through sensory bags on the light table, and children can also look forward to experiencing a snowstorm with cotton balls, ladles and tongs supporting fine motor skill development.

### Week 2: The Animal World

This week children will experience the animal world and its home, focusing on the senses of touch and sight. Children will be introduced to different textured elements for their sense of touch and different projections of animal in their habitats for them to explore...

### Week 3: Peek-a-boo, what do you see?

Children are naturally inquisitive and curious, in particular about how all the things around them work. Who is that in the mirror? What's that shiny object? What's creating that shadow on the wall? Come explore with us as we let curiosity reign using mirrors, light tables and projectors to encourage inquiry, investigation and theory testing.

### Week 4: Encounters with Fabric

We will connect last weeks self-discovery with this weeks tactile discovery enhancing our sense of touch. Fabric being a common material children are familiar with, we will invite children to enhance their fine motor skills exploring the different types of colourful fabric! Children will be able to wrap themselves up, walk, crawl and even play peek-a boo with their families using various types of fabrics.

### Week 5: Big and Small, Long and Short

Big and small. Short and long. Children are invited into a tactile exploration of big, small, long and short objects. Moulding big and small balls of playdough or sticking with long and short yarn, provides children with opportunities to make connections and understanding through this concept. For children at this stage, the world's various shapes and sizes and are a key element, we focus on developing spatial awareness with materials around them.

### Week 6: Moving Objects

In our last week, children will explore the moving objects surrounding them. Look at how the ball rolls! Look at it fly! Children are invited to join in the different discoveries made. Intriguing their curious minds, children learn how a ball rolls, how the swing on the pendulum works and how far the paper airplane will fly by observing and investigating through these discoveries!

## All the Details

Who: 6 - 18 month olds

When: 5 April to  
17 May 2019

Time: Fridays 11:15 - 12:15pm

Where: Turf City AND  
UE Square locations

\$240 per 6 class package

Includes 1 Drop In Session

\*redeemable from 6 or 12 class packages
